

# Generate Gliffy Diagrams in Confluence via Rovo

Turn Confluence context into diagrams without manual prompting or editing.

## Feature Overview

The Gliffy Rovo agent dramatically shortens your journey from prompt to diagram creation.

Because Rovo already understands the content stored in Confluence, the Gliffy agent can generate more relevant starting points with fewer manual steps.

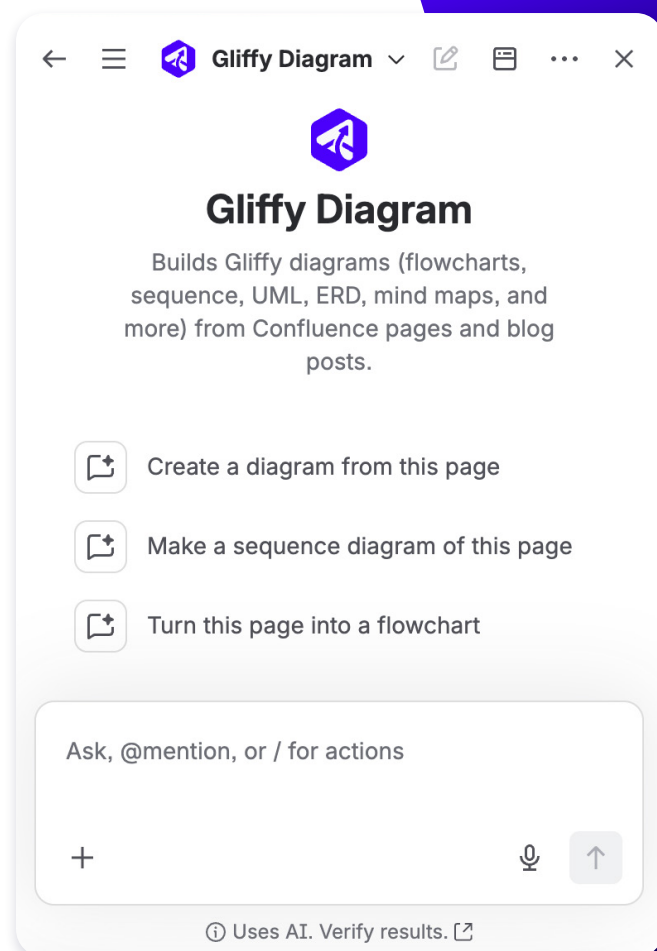

You can use natural-language prompts to create diagrams, discover related visuals, and reuse existing knowledge, making diagramming faster, more connected, and easier to adopt.

## Key Benefits

- **Go from prompt to diagram faster:** Generate a diagram draft directly from a Rovo conversation—no need to use the Gliffy editor.
- **Use Atlassian context automatically:** Rovo can apply knowledge from your Atlassian environment so diagrams are grounded in the work, requirements, and documentation your team already uses.
- **Reuse existing work:** Ask natural-language questions to find relevant Gliffy diagrams and related Confluence knowledge before creating something new.

## Why It Matters

Great diagrams help teams clarify complexity, but creating them often requires manual setup, context gathering, and time spent recreating information that already exists elsewhere. The Gliffy and Rovo integration helps remove that friction by bringing diagrams closer to the knowledge that shapes them.

## Get Started

Use the Gliffy Rovo agent today to turn a simple conversation into a complete diagram draft.
